

# User Stories

This page contains user stories derived from the use cases, written from the player's perspective.

## 4.1 Game Management

### US-1: Start New Game

As a player,  
I want to start a new game,  
So that I can begin playing from the beginning with initial capital.

Acceptance Criteria:

- Game starts with initial capital
  - Map is generated with cities and facilities
  - All game systems are initialized
- 

### US-2: Pause Game

As a player,  
I want to pause the game,  
So that I can take a break or plan my next moves without time passing.

Acceptance Criteria:

- Game time stops
  - All animations pause
  - UI remains interactive
- 

### US-3: Change Game Speed

As a player,  
I want to change the game speed (normal, fast, very fast),  
So that I can speed up slow periods or slow down for complex planning.

Acceptance Criteria:

- Speed changes are immediate
  - Current speed is clearly displayed
  - All game systems respect speed setting
- 

### US-4: Save Game

As a player,  
I want to save my current game state,  
So that I can continue playing later.

Acceptance Criteria:

- Game state is saved to file
  - Multiple save slots are available
  - Save file includes all game data (vehicles, routes, capital, etc.)
- 

### US-5: Load Game

As a player,  
I want to load a previously saved game,  
So that I can continue from where I left off.

Acceptance Criteria:

- Game state is restored accurately
  - Vehicles resume from their saved positions
  - All routes and infrastructure are restored
-

## 4.2 Map Interaction

### US-6: Scroll Map

As a player,  
I want to scroll the map in all directions,  
So that I can explore the entire game world.

Acceptance Criteria:

- Smooth scrolling with mouse or keyboard
  - Map boundaries are respected
  - Current viewport is indicated on minimap
- 

### US-7: Navigate via Minimap

As a player,  
I want to click on the minimap to jump to that location,  
So that I can quickly navigate large maps.

Acceptance Criteria:

- Clicking minimap moves viewport
  - Minimap shows current viewport position
  - Minimap is always visible
- 

## 4.3 Road Construction

### US-8: Build Road

As a player,  
I want to build roads on empty tiles,  
So that I can connect cities and facilities for transportation.

Acceptance Criteria:

- Roads can only be built on valid tiles
  - Cost is deducted from capital
  - Road is immediately visible on map
  - Road connects to existing road network
- 

### US-9: Build Road on Terrain

As a player,  
I want to build roads considering terrain height,  
So that I can create efficient routes while respecting terrain constraints.

Acceptance Criteria:

- Roads can only connect tiles with same height or  $\pm 1$  difference
  - Invalid placements are prevented
  - Clear error message if placement invalid
- 

## 4.4 Infrastructure

### US-10: Place Stop

As a player,  
I want to place stops along roads near cities and facilities,  
So that vehicles can load and unload cargo/passengers.

Acceptance Criteria:

- Stop can only be placed on roads
  - Stop is visually distinct
  - Stop can be used by multiple routes
-

### US-11: Build Garage

As a player,  
I **want to** build garages connected to the road network,  
**So that** I can purchase and maintain vehicles.

Acceptance Criteria:

- Garage must be connected to road network
  - Garage has a construction cost
  - Garage is visually distinct
  - Garage can purchase vehicles
- 

### US-12: Install Traffic Light

As a player,  
I **want to** install traffic lights at intersections,  
**So that** I can control traffic flow and prevent congestion.

Acceptance Criteria:

- Traffic lights can only be placed at 3 or 4-way intersections
  - Traffic lights are visually distinct
  - Vehicles obey traffic lights
- 

### US-13: Configure Traffic Light

As a player,  
I **want to** configure green signal duration for each direction,  
**So that** I can optimize traffic flow for busy routes.

Acceptance Criteria:

- Configuration interface is accessible
  - Green duration can be set per direction
  - Changes take effect immediately
- 

## 4.5 Route Management

### US-14: Create Route

As a player,  
I **want to** create circular routes connecting multiple stops,  
**So that** vehicles can automatically transport goods/passengers.

Acceptance Criteria:

- Route must be circular (start and end at same stop)
  - Route must include at least 2 stops
  - Route is visually indicated on map
  - Route can be assigned to vehicles
- 

### US-15: Assign Vehicle to Route

As a player,  
I **want to** assign a vehicle to a route,  
**So that** the vehicle automatically follows the route and transports cargo.

Acceptance Criteria:

- Vehicle must be at a stop on the route
  - Vehicle immediately starts following route
  - Vehicle repeats route automatically
-

## 4.6 Vehicle Management

### US-16: Purchase Vehicle

As a player,  
I want to purchase vehicles from a garage,  
So that I can expand my transportation network.

Acceptance Criteria:

- Vehicle selection menu shows available types
- Vehicle stats (speed, capacity, cost) are displayed
- Cost is deducted from capital
- Vehicle appears at garage

---

### US-17: View Vehicle Information

As a player,  
I want to view detailed information about a vehicle,  
So that I can monitor its status and performance.

Acceptance Criteria:

- Information panel shows vehicle type, cargo, route, status
- Current position is highlighted
- Maintenance status is displayed

---

### US-18: Sell Vehicle

As a player,  
I want to sell old or unwanted vehicles,  
So that I can recover some capital and reduce maintenance costs.

Acceptance Criteria:

- Vehicle can be sold from garage
- Sale price is added to capital
- Vehicle is removed from game

---

## 4.7 Terrain Management

### US-19: Terraform Terrain

As a player,  
I want to change the height of terrain tiles,  
So that I can build roads in difficult terrain.

Acceptance Criteria:

- Height can be changed by  $\pm 1$
- Cost is deducted from capital
- Adjacent height differences remain  $\leq 2$
- Visual representation updates immediately

---

## 4.8 Economy

### US-20: View Financial Status

As a player,  
I want to view my current capital and income/expenses,  
So that I can make informed financial decisions.

Acceptance Criteria:

- Current capital is always visible
- Income and expenses are tracked
- Financial report shows breakdown

US-21: Receive Income

As a player,  
I want to earn income when vehicles deliver cargo/passengers,  
So that I can expand my business.

Acceptance Criteria:

- Income is calculated per delivery
- Income is added to capital immediately
- Income amount depends on cargo type and distance

4.9 Game Over

US-22: Handle Bankruptcy

As a player,  
I want to be notified when I go bankrupt,  
So that I know the game has ended.

Acceptance Criteria:

- Game ends when capital becomes negative
- Clear game over message is displayed
- Option to restart or exit

4.10 Priority and Estimation

High Priority (MVP)

- US-1, US-2, US-3, US-8, US-10, US-14, US-15, US-16, US-20, US-21

Medium Priority

- US-4, US-5, US-6, US-7, US-11, US-17, US-18, US-19

Low Priority (Polish)

- US-9, US-12, US-13, US-22
